EXAMINER

PAN, JOSEPH T

ART UNIT PAPER NUMBER

2135

DATE MAILED: 06/22/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

10/007,193

Applicant(s)

SMITH, JEFFERY ALAN

Examiner

Joseph Pan

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 04 December 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 04 December 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 12-15, 16-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Sanschagrín et al. (U.S. Patent No. 6,295,540).

#### Referring to claims 1, 12, 16:

Sanschagrín et al. teach:

A method of providing read-only access to network element configuration, comprising:

Receiving a request to access said configuration data for said network element (see column 3, lines 4-5 of Sanschagrín et al.);

Initiating a communication session with said network element (see column 3, lines 5-8 of Sanschagrín et al.);

Receiving said configuration data from said network element (see column 3, lines 8-10 of Sanschagrín et al.); and

Transmitting said configuration data as a response to said request in the format selected, e.g. read-only format (see column 7, lines 47-51 of Sanschagrín et al.).

#### Referring to claims 2, 13, 17:

Art Unit: 2135

Sanschagrin et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. Sanschagrin et al. further disclose that the request to access the configuration data comprises the type of data to be returned for said network element (e.g. network element type, trail ID, slot ID, the ratio of carrier on a certain trail, etc.) (see column 6, lines 10-13 of Sanschagrin et al.).

Referring to claims 3, 14, 18:

Sanschagrin et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. Sanschagrin et al. further disclose that administrative features including security and logon procedure will facilitate a user performing the query request (see column 7, lines 39-42, and lines 62-65 of Sanschagrin et al.).

Referring to claims 4, 15, 19:

Sanschagrin et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. Sanschagrin et al. further disclose that the method further comprising:

Retrieving previously stored configuration data associated with said network element from a database (see column 3, lines 5-10 of Sanschagrin et al.);

Comparing said previously stored configuration data to said configuration data received from said network element (see column 3, lines 10-12 Sanschagrin et al.);

Determine whether said previously stored configuration data and said configuration data received from the network element are identical (see column 3, lines 10-12 Sanschagrin et al.);

In response to determining that said previously stored configuration data and said configuration data received from said network element are not identical, storing said configuration data received from said network element in said database (see figure 4, element 13-2; and column 7, lines 8-10 of Sanschagrin et al.).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5-11, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanschagrín et al. (U.S. Patent No. 6,295,540), further in view of Branton, Jr. et al. (U.S. Patent No. 5,870,558).

Referring to claims 5, 20:

i. Sanschagrín et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. However, Sanschagrín et al. do not specifically mention that the request is received at a web site.

ii. Branton, Jr. et al. disclose a system for effectively retrieving and managing network data, wherein a web server interfaces between the company-wide intranet and the network management system (see column 4, lines 4-6 of Branton, Jr. et al.).

iii. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Branton, Jr. et al. into the system of Sanschagrín et al. to provide a web server interface for effectively retrieving and managing network data.

iv. The ordinary skilled person would have been motivated to have applied the teaching of Branton, Jr. et al. into the system of Sanschagrín et al. to provide a web server interface, so that any authorized user can access the network management system via a standard web browser program that

Art Unit: 2135

communicates with the web server via Hyper-Text Transfer Protocol (HTTP). Such programs are generally available for a wide variety of computer platforms (see column 4, lines 6-10 of Branton, Jr. et al.).

Referring to claims 6, 11:

Sanschagrín et al. and Branton, Jr. et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. Branton, Jr. et al. further disclose that the web server resides in intranet (see column 4, lines 4-6 of Branton, Jr. et al.).

Referring to claim 7:

Sanschagrín et al. and Branton, Jr. et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. Branton, Jr. et al. further disclose that the network element is located on an optical network (see column 2, lines 18-24 of Branton, Jr. et al.).

Referring to claim 8:

i. Sanschagrín et al. teach:

A system for providing read-only access to network element configuration data, comprising:

A network element operative to store configuration data describing the current configuration state of the network element, and further operative to provide said configuration data in response to requests for said data (see column 1, lines 16-19 of Sanschagrín et al.);

A server computer at which a request may be received to view said configuration data (see column 3, lines 4-5 of Sanschagrín et al.); to retrieve said configuration data from said network element in response to said request (see column 3, lines 5-10 of Sanschagrín et al.); and to provide said configuration data in read-only format in response to said request (see column 7, lines 47-51 of Sanschagrín et al.).

ii. Sanschagrín et al. teach the claimed subject matter: a method for providing read-only access to network element configuration data. However, Sanschagrín et al. do not specifically mention that the network

Art Unit: 2135

element is located on an optical network, and that the server provides a web site interface. On the other hand, Branton, Jr. et al. disclose a system wherein a web server interfaces between the company-wide intranet and the network management system (see column 4, lines 4-6 of Branton, Jr. et al.). Branton, Jr. et al. further disclose that the network element is located on an optical network (see column 2, lines 18-24 of Branton, Jr. et al.).

iii. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Branton, Jr. et al. into the system of Sanschagrín et al. to provide a web server interface for effectively retrieving and managing network data, and to use an optical network in the system.

iv. The ordinary skilled person would have been motivated to have applied the teaching of Branton, Jr. et al. into the system of Sanschagrín et al. to provide a web server interface, so that any authorized user can access the network management system via a standard web browser program that communicates with the web server via Hyper-Text Transfer Protocol (HTTP). Such programs are generally available for a wide variety of computer platforms (see column 4, lines 6-10 of Branton, Jr. et al.). The ordinary skilled person would have been motivated to have applied the teaching of Branton, Jr. et al. into the system of Sanschagrín et al. to use an optical network in the system, because it is well known to those skilled in the art of fiber optical networks that optical network (e.g. SONET) is designed to carry large volume of traffic over relatively long distance on fiber optical cable.

Referring to claim 9:

Sanschagrín et al. and Branton, Jr. et al. teach the claimed subject matter: a system for providing read-only access to network element configuration data. Sanschagrín et al. further disclose that administrative features including security and logon procedure will facilitate a user performing the query request (see column 7, lines 39-42, and lines 62-65 of Sanschagrín et al.).

Referring to claim 10:

Sanschagrin et al. and Branton, Jr. et al. teach the claimed subject matter: a system for providing read-only access to network element configuration data. Sanschagrin et al. further disclose that the system further comprising:

Retrieving previously stored configuration data associated with said network element from a database (see column 3, lines 4-10 of Sanschagrin et al.);

Comparing said previously stored configuration data to said configuration data received from said network element (see column 3, lines 10-12 Sanschagrin et al.);

Determine whether said previously stored configuration data and said configuration data received from the network element are identical (see column 3, lines 10-12 Sanschagrin et al.);

In response to determining that said previously stored configuration data and said configuration data received from said network element are not identical, storing said configuration data received from said network element in said database (see column 7, lines 8-10 Sanschagrin et al.).

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Pan whose telephone number is 571-272-5987.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Vu can be reached at 571-272-3859. The fax and phone numbers for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2135

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-2100.
